Technical Delivery Manager

PROFESSIONAL SUMMARY

Technical Delivery Manager with 20+ years engineering reliable, high-scale platforms across e-commerce, fintech, and government sectors. Track record of inheriting broken or absent systems and delivering measurable outcomes — from an 8x order capacity increase on a platform generating 1B SAR annual revenue, to greenfield government digital transformation with zero scope disputes. Equally fluent in architecture decisions, cross-functional team leadership, and executive stakeholder management.

CORE COMPETENCIES

Project & Program Management	Enterprise Architecture (TOGAF)	Digital Transformation Strategy
Agile / Scrum Delivery	Stakeholder & Executive Engagement	Risk & Issue Management
Team Building & Leadership	Budgeting & Resource Planning	Vendor & Contract Management
Legacy System Modernization	Cloud & Hybrid Architecture	Business Process Re-engineering
CI/CD & DevOps Practices	Requirements Analysis (BRD/FRD)	Change Management

TECHNICAL PROFICIENCY

Cloud & Infrastructure: Microsoft Azure, Cloud & Hybrid Architectures, SQL Server (Always On), Redis High Availability.

Enterprise Solutions & Tools: Jira, Microsoft Project, Confluence, Enterprise ERP Data Pipelines.

Modern Software Frameworks: C# .NET Core, Microservices, RESTful APIs, Python (Data Science, Applied AI).

Applied AI & LLMs: Local LLM deployment, Retrieval-Augmented Generation (RAG), LangChain

PROFESSIONAL EXPERIENCE

Technical Delivery Manager

Feb 2025 – Present

EY, Amman, Jordan

Led end-to-end technical delivery for a new platform engagement for a newly established Saudi government entity, replacing entirely manual, email/spreadsheet-based operations with a purpose-built, multi-stakeholder digital platform.

- Drove requirements engineering as a core delivery work-stream — conducting structured workshops three times weekly to map and validate complex business process workflows using MS Visio, translating them into a comprehensive Business Requirements Document (BRD) encompassing process flows, epics, features, user stories, and UX wire-frames.
- Secured formal client sign-off on the BRD from the client Product Manager, establishing a clear and traceable requirements baseline before development commenced — the project's most critical risk-mitigation milestone.
- Governed Agile-Scrum delivery across a 5-person cross-functional team, running 2-week sprint cycles with daily stand-ups and end-of-sprint client review sessions, ensuring continuous stakeholder alignment throughout delivery.
- Achieved full client acceptance and formal sign-off upon delivery, with zero scope disputes — a direct result of rigorous upfront requirements traceability and structured sprint-by-sprint validation.

Technical Delivery Manager / Team Lead

2018 – 2024

MStart, Amman, Jordan

Brought on to architect and lead a full backend rewrite of a high-traffic digital goods e-commerce platform operating across web, Android mobile, Android EVD machines, and a third-party reseller API network — replacing a legacy system that crashed under 15,000+ daily orders.

- Delivered an 8x capacity increase — new backend handled 120,000+ daily orders with latency dropping from 3s to sub-200ms — directly unlocking significant revenue growth.
- Led end-to-end technical delivery across a 15-person cross-functional team, governing architecture, recruitment, resource allocation, and daily Agile-Scrum operations over a 6-year engagement, reporting directly to executive leadership.
- Modernized a mission-critical B2B platform serving 7,000+ retailers and wholesalers, integrating ~30 external vendor and payment APIs across a growing digital marketplace.
- Redesigned production infrastructure for 99.9% uptime using SQL Server High Availability and a multi-layer caching architecture (SQL Server, Redis, Memcached), executing a zero-downtime database cut-over on a live environment.
- Led ~50 production releases, moving from weekly to predictable monthly cycles with deployment checklists and rollback procedures, cutting deployment windows from ~2 hours to 30–60 minutes and significantly reducing production incidents.
- Designed a database archiving strategy that reduced the operational database from ~1.6 TB to 600 GB, and introduced a dedicated read-only reporting database to eliminate reporting load from production during peak hours.
- Recruited and hired 4 engineers from ~20 candidates, mentored junior developers, and established coding standards and structured performance evaluations.

Co-Founder & Head of Technical Delivery (CTO)

2017 – 2018

Kafou Services, Jordan

- Co-founded and led the technical strategy and full product delivery of a two-sided mobile marketplace connecting end-users with local service providers.
- Designed and developed backend services, web administration portals, and mobile application APIs while integrating payment processing, geolocation, and messaging services.

ERP Systems & Financial Data Governance Specialist

2013 – 2017

Mahmoud Saleh Abbar, Jeddah, Saudi Arabia

- Recruited directly by the CFO to resolve a critical financial data integrity crisis — years of accumulated errors in the ERP had rendered core financial outputs unreliable and unauditible.
- Conducted a forensic audit of the ERP database, reviewing and reconciling millions of records against physical archives across multiple fiscal years until each period produced accurate, trustworthy financial figures.
- Designed and delivered complex custom financial reports for C-suite consumption that the ERP could not produce natively, giving leadership accurate visibility into business performance for the first time.
- Sustained data quality and ERP integrity over a 4-year engagement, establishing processes to prevent recurrence.

Product Delivery Manager & Lead Enterprise Architect

2005 – 2013

Grant Thornton, Saudi Arabia

Led the complete redesign of an Operational Risk Management (ORM) platform, transforming a legacy single-user Access application into a scalable, multilingual, multi-tenant web solution that became a key business offering across the EMEA region.

- Served as sole Architect and Lead Developer to design and engineer a highly secure, multilingual ASP.NET enterprise platform tailored for regulated financial environments.
- Drove exceptional commercial growth as Product Owner, expanding client acquisition from 5 to 40+ premier banks and insurance companies across EMEA.
- Defined the product roadmap, UX, technical architecture, reporting framework, multilingual capabilities, and security model, independently making all technology decisions.
- Delivered customer implementations and training across Saudi Arabia, Jordan, Qatar, Lebanon, India, and the UK, collaborating with Grant Thornton SA and CGC UK leadership.
- Established long-term C-level client relationships through architecture guidance and Tier-3 support over an eight-year engagement.

EDUCATION

Bachelor's Degree in Business Administration

Applied Science University, Amman, Jordan
