

AMJAD M. MASOUD

Technical Leader | Enterprise Architecture, Engineering Delivery

Amman, Jordan · amjadmasoud@hotmail.com · (+962) 799 312 787 · LinkedIn · amjadov.github.io/web

PROFESSIONAL SUMMARY

Technical leader with 20+ years spanning **hands-on enterprise architecture, engineering management, and delivery leadership** — as sole Architect, CTO, and Technical Delivery Manager — across fintech, e-commerce, and government sectors. Built and led engineering teams of up to 15, personally owning architecture decisions, code quality, and production outcomes rather than delegating them: designed and shipped a multilingual ASP.NET platform as sole architect/developer for 8 years, architected a backend rewrite that delivered an **8x order-capacity increase** on a platform processing 120,000+ daily orders, and currently work hands-on in Python, RAG pipelines, and local LLM deployment. Consistent track record of translating engineering rigor into measurable delivery: 99.9% uptime redesigns, zero-non-conformity PCI-DSS audits, and zero-scope-dispute government delivery through structured requirements governance. Native Arabic, fluent English, deep MENA market experience (Jordan, Saudi Arabia, Qatar, Lebanon, UAE-adjacent EMEA).

CORE COMPETENCIES

- | | | |
|--|--------------------------------------|--|
| • Enterprise Architecture (TOGAF) | • Microservices & RESTful API Design | • Cloud & Hybrid Architecture (Azure) |
| • Engineering KPIs & Delivery Governance | • CI/CD & DevOps Practices | • Emerging Tech Evaluation (AI/ML, RAG) |
| • Team Building & Technical Mentoring | • Agile / Scrum Delivery | • Performance & Accountability Systems |
| • Executive & C-Suite Stakeholder Engagement | • Legacy System Modernization | • Risk & Issue Management |
| • Vendor & Contract Management | • Business Process Re-engineering | • Governance & Compliance (PDPL, NCA ECC, PCI-DSS) |

TECHNICAL PROFICIENCY

- **Architecture & Cloud:** Microsoft Azure, cloud & hybrid architectures, microservices, RESTful APIs, distributed systems, SQL Server (Always On), Redis high availability.
- **Engineering Practices:** CI/CD, DevOps, code quality standards, technical debt management, design review practices, C# .NET Core.
- **Applied AI & Emerging Tech Evaluation:** Python (data science, applied AI), local LLM deployment, Retrieval-Augmented Generation (RAG), LangChain — hands-on evaluation of AI/ML capability for production use.
- **Delivery & Governance Tooling:** Jira, Microsoft Project, Confluence, Enterprise ERP data pipelines.

PROFESSIONAL EXPERIENCE

Technical Delivery Manager

Feb 2025 – Present

EY, Amman, Jordan

Led end-to-end technical delivery for a new platform engagement for a newly established Saudi government entity, replacing entirely manual, email/spreadsheet-based operations with a purpose-built, multi-stakeholder digital platform.

- Drove requirements engineering as a core delivery work-stream, running structured workshops three times weekly to map and validate complex business process workflows, translated into a comprehensive BRD covering process flows, epics, features, user stories, and UX wireframes.
- Secured formal client sign-off on the BRD before development commenced, establishing a traceable requirements baseline — the project's most critical risk-mitigation milestone.
- Governed Agile-Scrum delivery and technical decisions across a 5-person cross-functional engineering team, running 2-week sprint cycles with daily stand-ups and end-of-sprint client review sessions.
- Governed full regulatory compliance for the platform, aligning architecture and controls with Saudi PDPL and NCA ECC standards to pass security readiness reviews prior to sign-off.
- Achieved full client acceptance with **zero scope disputes**, a direct result of rigorous upfront requirements traceability and structured sprint-by-sprint technical validation.

Technical Delivery Manager / Team Lead

2018 – 2024

MStart, Amman, Jordan

Personally architected and led a full backend rewrite of a high-traffic digital goods e-commerce platform spanning web, Android mobile, Android EVD machines, and a third-party reseller API network, replacing a legacy system that crashed under 15,000+ daily orders.

- Delivered an **8x capacity increase** through direct architectural redesign — new backend handled 120,000+ daily orders with latency dropping from 3s to sub-200ms — directly unlocking revenue growth.
- Owned architecture, code quality, and technical decision-making across a 15-person cross-functional engineering team over a 6-year engagement, in addition to recruitment, resourcing, and daily Agile-Scrum operations, reporting directly to executive leadership.

- Modernized a mission-critical B2B platform serving 7,000+ retailers and wholesalers, personally coordinating technical integration across 30 external vendor and payment platforms.
- Redesigned production infrastructure for 99.9% uptime using SQL Server High Availability and a multi-layer caching architecture (SQL Server, Redis, Memcached), executing a zero-downtime database cut-over on a live environment.
- Led ~50 production releases, moving from weekly to predictable monthly cycles with deployment checklists and rollback procedures — cutting deployment windows from ~2 hours to 30–60 minutes and reducing production incidents.
- Designed a database archiving strategy that reduced the operational database from ~1.6TB to 600GB, and introduced a dedicated read-only reporting database to remove reporting load from production during peak hours.
- Recruited and hired 4 engineers from ~20 candidates, mentored junior developers, and established coding standards and structured, criteria-based performance evaluations.
- Maintained continuous PCI-DSS compliance across a multi-channel payment architecture handling 120,000+ daily orders, managing annual third-party security audits with **zero major non-conformities**.

Co-Founder & Delivery Lead (CTO)

2017 – 2018

Kafou Services, Jordan

- Co-founded and led technical strategy and full-stack product delivery for a two-sided mobile marketplace connecting end-users with local service providers.
- Personally designed and developed backend services, web administration portals, and mobile application APIs, integrating payment processing, geolocation, and messaging services.

ERP Systems & Financial Data Governance Specialist

2013 – 2017

Mahmoud Saleh Abbar, Jeddah, Saudi Arabia

- Recruited directly by the CFO to resolve a critical financial data integrity crisis after years of accumulated ERP errors had rendered core financial outputs unreliable.
- Conducted a forensic audit of the ERP database, reconciling millions of records against physical archives across multiple fiscal years until each period produced accurate, trustworthy figures.
- Designed and delivered complex custom financial reports for C-suite consumption that the ERP could not produce natively.
- Sustained data quality and ERP integrity over a 4-year engagement, establishing processes to prevent recurrence.

Product Delivery Manager & Lead Enterprise Architect

2005 – 2013

Grant Thornton, Saudi Arabia

Served as sole Architect and Lead Developer, transforming a legacy single-user Access application into a scalable, multilingual, multi-tenant Operational Risk Management (ORM) web platform that became a key regional business offering.

- Independently designed and engineered a highly secure, multilingual ASP.NET enterprise platform tailored for regulated financial environments — full ownership of architecture, security model, and technology decisions for 8 years.
- Drove commercial growth as Product Owner, expanding client acquisition from 5 to **40+ premier banks and insurance companies** across EMEA.
- Defined product roadmap, UX, technical architecture, reporting framework, and multilingual capabilities end-to-end.
- Delivered customer implementations and training across Saudi Arabia, Jordan, Qatar, Lebanon, India, and the UK, collaborating with Grant Thornton SA and CGC UK leadership.
- Established long-term C-level client relationships through direct architecture guidance and Tier-3 support over an eight-year engagement.

EDUCATION

Bachelor's Degree in Business Administration

Applied Science University, Amman, Jordan

PROFESSIONAL CERTIFICATIONS

- Project Management Professional (PMP®) | Project Management Institute (PMI) — March 2026 – March 2029
- TOGAF Foundation (Level 1) — In Progress
- Microsoft Certified: Azure Fundamentals (AZ-900) | Microsoft — November 2025
- EY Applied AI – Bronze Learning | EY — March 2025
- Building Business Acumen | EY — March 2026
- Developing Client Relationships | EY — March 2026
- Applied Data Science with Python – Level 2 | IBM — 2017
- Python for Data Science | IBM — 2017
- Advanced Certified Operational Risk Executive (CORE2) | Grant Thornton — 2010
- Certified Operational Risk Executive (CORE) | Grant Thornton — April 2007
